

Did you know the Twin Oaks Landfill is open for business every Monday through Saturday
RAIN OR SHINE?

Thanks to the special attention our team pays to the roads inside the facility, we're able to operate even in the pouring rain.

When you think about the daily responsibilities at a landfill... I bet you don't think about road maintenance!

This bridge is the lifeline of the Twin Oaks Landfill. It's the path that takes our customers from the scale house to the working face and back out to Highway 30.

This bridge never changes and is frequently monitored by the Texas Department of Transportation.

It's the structural integrity of these roads that really sets the Twin Oaks Landfill apart from other facilities across the nation.

Imagine it's the end of a long, rainy day You're finishing up your last route and then you get to head home to your family. But oh no, your truck gets stuck in the mud! It looks like you'll be here awhile...

That scenario is exactly why the roads at the Twin Oaks Landfill look like this so that you can get in and out safely and quickly.

We also utilize our de-mudder on rainy days. Trucks can drive directly over it to help rid their tires of mud before heading back out onto the highway.

With more rain in the forecast, we hope customers feel at ease knowing how much is being done to keep them safe when they visit the Twin Oaks Landfill.
